

Dear Dr. William S. Stokes,

Please stop these horrific Lethal Animal-Poisoning Tests, it absolutely destroys my heart and conscience when i see and read what is done to these gorgeous animals. It absolutely horrifies me. I cannot even imagine the excruciating pain these animals are forced to endure by people who call themselves scientists.

I am sure that there are other ways that the National Institute of Environmental Health Sciences can test these dangerous chemicals. It's ironic that your government has the world Health in it..because these huge corporation is destroying the health of animals in the most horrific ways that i have ever seen..please Dr. William Stokes use non-animal (in vitro cell culture) methods to study the toxic effects of chemicals from acute (short-term) exposure.

I am begging you..Now i see that the department will be accepting comments until November 13, 2001..Unfortunately i didn't know this...but who cares about that right now...this is too important i had to write to you.

Please stop these horrible tests just stop them please.  
I am beggin you i am begging you.
